CASE STUDY

How BuildAI streamlined global contractor onboarding with Dechub

A professional snapshot of how Dechub helps fast-moving teams replace fragmented contractor workflows with one operating layer for contracts, identity verification, invoice approval, and cross-border payouts.

3

US contractors onboarded in one afternoon

Same day

Contract generation and e-sign completion through DocuSign

24 hrs

Typical KYC verification turnaround for contractor activation

1-2 days

Payment delivery window after invoice approval via Wise

OVERVIEW

The challenge

BuildAI, a Bengaluru-based product company hiring specialized US contractors, needed a faster way to issue agreements, collect signatures, verify worker identity, and release cross-border payments without creating new legal and finance bottlenecks every time a new contractor joined.

Before Dechub

Manual handoffs across contracts, onboarding, document collection, invoicing, and payouts slowed hiring momentum.

Primary risk

Each new contractor introduced compliance, payment coordination, and turnaround uncertainty for operations teams.

Business goal

Launch a repeatable hiring workflow that operations could run without depending on legal review for standard engagements.

Dechub solution footprint

- Auto-generated contractor agreements for standard US engagements
- Embedded DocuSign workflow for dual-party signatures
- KYC identity verification with document and selfie checks
- Invoice submission and approval in a shared dashboard
- Wise-powered payout coordination across 170+ countries
- Centralized document trail for contracts, KYC, invoices, and payment records

EXECUTION

What changed in the workflow

1

Contract creation moved from ad hoc drafting to guided generation

BuildAI entered engagement details once and generated standardized contractor agreements without restarting the process with each hire.

2

Signature collection became a tracked, same-day digital flow

Contractors received the agreement, signed through DocuSign, and triggered a clear countersign process for the company.

3

KYC and payout setup became part of onboarding, not a separate project

Identity verification, bank details, and payment readiness were handled inside the same operating sequence instead of through disconnected tools.

4

Invoice approvals and payouts became operationally predictable

Once work was complete, contractors submitted invoices through their portal and BuildAI could approve payment from one dashboard.

RESULTS

Operational impact

Based on the current product workflow and customer proof points in the Dechub workspace, the initial rollout created clear gains in speed, coordination, and visibility for global contractor operations.

3 contractors

Onboarded in one afternoon, giving BuildAI immediate hiring capacity without a long admin cycle.

1 platform

Used in place of a fragmented stack for contracts, e-sign, KYC, payment coordination, and document tracking.

24-hour KYC

Typical identity verification turnaround helped teams move from invite to activation with less waiting.

1-2 business days

Expected payout window after invoice approval, improving trust and consistency for contractor payments.

"We hired 3 US contractors in one afternoon. Contract generated, signed via DocuSign the same day, and payment through Wise without any issues."

CEO, BUILDAI | BENGALURU

Why this matters for Dechub

- Shows a clear wedge into global contractor management for fast-growing companies
- Demonstrates that compliance-heavy workflows can feel lightweight for operations teams
- Supports Dechub's positioning as a practical alternative to stitching

Recommended next story angles

- Finance-led case study focused on payment visibility and reconciliation
- Compliance-led case study centered on contract governance and KYC controls

together multiple vendors

- Creates a repeatable story for sales, partnerships, and investor conversations
